Starting from the experience of the previous 15 Mattoni (bricks) of the Italian Health System www.nsis.salute.gov.it, the Project Mattone Internazionale aims at increasing the role of the regional health systems and policies in Europe by strengthening their competences in investigating opportunities offered by the European Union and other international organizations ("bringing the health system and policies of the Italian regions in Europe and Europe in the health systems of the Italian regions").

Under the auspices of the Italian Ministry of Health the Veneto Region is coordinating the project with the support of the Tuscany Region (co-coordinator).

The project foresees the implementation of educational and information activities addressed to Ministry organizations, Italian Regions, local social-health authorities, hospitals as well as other stakeholders involved in health topics, in order to promote the dissemination of EU policies and opportunities to access EU financed programs in the framework of health, research and innovation in the national territory.

In addition, the project will activate specific mechanisms for the promotion and participation of all qualified stakeholders to European and international health policies.
